

# Bolphane® BLG

Low gauge cross-linked polyolefin shrink film

**Cross-linked technology provides a more forgiving film in less than optimum equipment conditions**

**Suited for a wide range of product applications.**

**Extended length rolls provide greater value with less changeover and machine downtime**

**Excellent optics for outstanding shelf appeal.**

## APPLICATIONS

Bolphane® BLG reveals itself in a variety of applications from housewares and office supplies to multipacking. Most preferred are the light products that need excellent shelf appeal without requiring the higher impact resistance of heavier films.

Down gauging gives you the opportunity to save money by significantly reducing packaging material costs. It is also an opportunity to optimize stock management and to reduce material waste. BLG shows outstanding sealability on a broad range of equipment, thanks to Bollore's in-line cross-linking process.
